

User Guide — Attendance & Transport System

Asahi Shimbun General Services — part-time attendance & transport-expense system (日本語版: USERGUIDE.ja.md)

A getting-started guide for first-time users. Screens shown use the June 2026 sample data.

1. What the system does

For part-time staff working the high-school baseball tournament, it handles:

- Recording daily **attendance** (work day, hours, stadium) and **transport / expenses**
- Auto-generating the **timesheet, invoice, payslip and attachments** from those records (PDF, email)
- Auto-calculating withholding tax (daily table, category 丙), transport, meal allowance, etc.

There are two kinds of user:

Role	Can do
Staff (part-timer)	Enter their own attendance/expenses; view, PDF and email their own monthly documents
Admin	Review all staff, manage the masters (stadiums, staff, route fares, pay rates, accounts), configure email

2. Signing in

1. Open the system URL.
2. Enter your **email** and **password**, then press **Sign in**.
3. The **eye icon** at the right of the password field shows/hides what you typed.
4. The **EN / 日本語** button (top right) switches the display language.

Demo accounts (also shown on the sign-in screen):

Role	Email	Password
Admin	admin@example.com	admin123
Staff	staff@example.com	staff123

After signing in you land on the screen for your role (staff → My Page, admin → All Records).

3. Staff

Top menu: **My Page / Attendance & Expenses / Monthly · Documents**

3-1. My Page

Shows this month's totals (work days, total hours, transport, net pay, salary, gross, tax) and a per-day breakdown. Use the **month picker** (top right) to change month; it opens on a month that has data.

3-2. Attendance & Expenses

Add a work day (form at the top):

1. Enter **Date**, **Stadium**, **Start** and **End**.
2. **Break**: tick **Break taken**, then enter **hours** and **minutes** in the two boxes beside it.

| Break | Enter | | --- | --- | | 1 hour | 1 h 0 m | | 30 minutes | 0 h 30 m | | 1 h 25 m | 1 h 25 m |

- **Copy 1:25 straight off the paper timesheet into the two boxes.** Any number of minutes can be recorded.
- The minutes box takes 0–59; anything an hour or longer goes in the hours box.
- **Decimals cannot be entered.** With hours and minutes separated, there is no way to type 1.25 and have it mistaken for 1 h 25 m.
- Untick the box to record no break (0 minutes).
- What you enter (hours + minutes) and what the screens and timesheet PDF show (1:25) mean the same thing — no conversion.

1. **Meal allowance**: choose ☐ (yes) or ☒ (no) .

- Selectable **only when the day's worked time exceeds 6 hours**. On days of 6 hours or less it is disabled and shows "Not eligible (worked ≤ 6h)".

1. Press **Add work day**.

- If a **route fare is registered** between the home station and the stadium station, the **round-trip transport is applied automatically**. If not, only the day is saved; transport appears once an admin registers the route.

Registered days (table):

- Columns: date, stadium, start, end, worked, **overtime**, **Meal allowance** (○/×).
- **Overtime** shows the time worked past 8 hours, calculated for you ("—" when there is none).
- Per row: **pencil icon** = edit that day, **trash icon** = delete.

Transport & expense lines: lists the auto transport alongside any expenses you have entered.

Add an expense (the form above the list):

1. Pick the **date**.
2. Pick the **type**: **Per-diem** / **Personal phone use** / **Lodging** / **Other**.
3. Enter the **amount** and, optionally, a **note**, then press **Add expense**.

- Entered expenses print on **Per-diem / phone / other (attachment)**, grouped by type with date, note and amount.
- **Only personal phone use is taxable** — it is added to salary. Per-diem goes to transport, lodging and other to "other"; all three are non-taxable.
- Delete your own entries with the **trash icon**.

- **Transport is not entered here.** It is applied automatically from the registered fare when a work day is saved, so it is left off the type list to prevent claiming the same journey twice. Rows marked **auto** are those automatic lines and cannot be deleted here.

3-3. Monthly • Documents

Five documents can be produced:

Document	Content
Timesheet (勤務表)	Per-day work (start, end, break, worked, meal ○/×)
Transport (attachment)	One row per one-way leg with fares
Per-diem / phone / other (attachment)	Allowance and expense lines
Invoice (請求明細書)	Breakdown of salary, transport and other
Payslip (給料計算書)	Gross, withholding tax, net pay

Time format (the same as the existing paper form)

On the timesheet and on screen, **break, worked, overtime and night** — and every total — are shown as **h:mm**, not as decimals.

Field	Example
Break	1:00 / 1:25
Worked (excl. break)	7:50 / 7:35
Direct / indirect subtotals, grand total	101:00 / 108:35
時給換算用勤務時間 (this field only, decimal)	101 / 108.58

- Not limited to quarter hours — a break of 1:25 prints as 1:25 .
- Totals accumulate past 24 hours (101:00), they do not wrap to 5:00 .
- The only decimal figure is 時給換算用勤務時間, the number the hourly rate is multiplied by (June 2026: 101 × ¥1,300 = ¥131,300).

To confirm — how this field is written when it isn't a whole number

In the June 2026 timesheet we were given, the total is exactly 101:00 , so the field reads 101 — which cannot tell us whether the form writes decimals or simply whole hours.

This system prints two decimal places (a 108:35 total becomes 108.58). If that differs from your practice, tell us and we will match it.

On each document card:

- **View** — render it below the cards
- **PDF** — open the PDF in a new tab (save from there)
- **Email** — send it, with the PDF attached, to your registered address (or the admin's test address, if set)

- The document on screen can also be saved via **Print / Save as PDF**.

About PDF (it works on the demo)

- The demo deployment (Render) generates PDFs **server-side**. A Japanese font (Noto Sans JP) is bundled, so kanji and kana render properly rather than as boxes. Each document takes **under about 5 seconds**.
- When the footer reads **"PDF: server-side ready"**, the PDF button is live.
- On any deployment where the server cannot generate PDFs, pressing the button shows **"use the browser's Save as PDF"** instead. Use **View** → **Print / Save as PDF**; the content is identical.

4. Admin

Top menu: **All Records / Stadiums / Staff / Accounts / Route Fares / Pay Rates / Email Settings**

4-1. All Records

Monthly totals for every staff member (work days, worked, **overtime**, salary, transport, tax, net pay, **meal allowance**).

- The **overtime** column shows the month's hours past 8h/day with the **premium (¥)** they earned underneath.
- The **meal-allowance** column is qualifying days (○) × the **Pay Rates meal amount**. While the amount is unset (¥0) it shows ¥0.
- **Details** on a row opens that person's **per-day breakdown**. There you can re-tag each day as **Tournament (direct) / Editorial (indirect)** — its transport moves to the same bucket. The **Meal allowance (○/×)** is shown too.

4-2. Masters

Screen	Content
Stadiums	Name, address, nearest station
Staff	Name, postal code, address, home nearest station, phone
Route Fares	One-way fare between a home station and a stadium station (drives auto transport)
Pay Rates	Hourly, overtime (≤60h / >60h), night premium, meal allowance (flat)
Accounts	Create accounts, change roles, reset passwords, delete

The **meal-allowance amount** is entered on **Pay Rates**. It starts at **¥0**. Enter an amount and save, and it is added to the wage on qualifying (○) days and flows into the documents and All Records.

4-3. Email Settings

For confirming that document email is delivered.

- Set a **test recipient address** and every document email goes there instead of each staff member's own address (no registered address is changed).

- **Send test** sends a throwaway message.
- Clear the field and save to restore normal delivery to each staff member.

Trying email on the demo

Mail really is delivered from the demo (over HTTPS; this has been verified end to end). But the sample staff account's registered address is `staff@example.com`, which is **not a real address**, so nothing arrives unless you redirect it first:

1. Open **Email Settings**, enter **your own address** and save.
 2. Go **straight** to **Monthly · Documents** and press **Email** on any document.
 3. Check your inbox — and your **spam folder**.
- The mail carries the document as the **HTML body**, with the same document **attached as a PDF**.
 - On success the screen shows which address it went to.

Note — the demo resets Email Settings

The demo keeps no data on disk, so after a period of inactivity it sleeps and **wakes with Email Settings cleared**.

With the field empty, **Email** sends to `staff@example.com` — it reports success and nothing arrives.

Check the address is still there immediately before testing. A production deployment with a real database does not reset.

5. How the figures are calculated (reference)

- **Salary**: sum of "worked hours × hourly rate" for each day (plus the overtime premium and any taxable expenses).
- **Overtime**: applied automatically to **anything worked past 8 hours in a day** — nobody enters it.
- Example: 9 hours worked → $¥1,300 \times 8h + ¥1,300 \times 1.25 \times 1h = ¥12,025$
- The invoice itemises it as "hourly (all worked time)" plus "overtime (premium)".
- Past **60 overtime hours in a month**, the remainder moves to the higher premium (1.5× by default).
- Breaks don't count as worked time: 10:00–19:00 with a 1h break is 8 hours worked, so no overtime.
- **Withholding tax**: looked up **per day** in the daily table (category 丙) and summed — not applied to the monthly total. It starts once a day's taxable amount exceeds about ¥9,800. The overtime premium is taxable and included.
- **About the "estimate" label**: the 丙 daily table held in this system covers up to **¥14,800 per day**. Above that, the tax for that day is an **estimate outside the transcribed range**.
- When a month contains such a day, **My Page, All Records** and the **payslip** show an **"estimate"** label naming the dates. No label means every figure came from the official rows.
- With overtime paid, this starts at about **10h45m worked** (¥14,869 taxable). Without overtime it took about 11h24m.

- **In a month showing the label, the withholding tax and net pay are not final.** Confirm the official figure before finalising.
- **Transport:** the registered **one-way fare × 2 (round trip) × work days**, applied **automatically** when a work day is saved. Non-taxable.
- The amount comes straight from Route Fares. Each leg is recorded as its own line.
- If a fare is registered for the return direction it is used; otherwise the outbound fare is mirrored.
- With no route registered, the day is saved and transport is ¥0. Registering the route fills it in.

Current scope — actual-cost reimbursement

"Actual cost, capped at the registered fare" cannot be entered from any screen.

The cap itself is implemented and enforced internally — a claim above the registered fare is rejected — but there is **no screen for entering an actual cost**, so it is not usable in practice. Transport today is the automatic calculation above, and only that.

Personal phone use, per-diem, lodging and other expenses **can** be entered — via **Add an expense** on the Attendance & Expenses screen (see 3-2 below).

- **Meal allowance:** a flat amount on days that are **during the tournament** and **exceed 6 worked hours**. Set the amount on Pay Rates (¥0 until set).

6. Notes

- Each screen opens on a **month that has data**; once you enter data it opens on the current month.

Demo data is not saved (important)

The demo keeps its database in the server's memory, so **whenever the server stops or restarts, everything entered is lost and it returns to the June 2026 sample.**

- **When:** the free plan sleeps the server after a period of inactivity. The next visit wakes it — already reset. Deploys do the same.
- **What:** not just attendance and expenses, but **stadiums, staff, route fares, pay rates, email settings, any accounts added and any passwords changed** all revert to the sample.
- **Back to:** the June 2026 sample (¥131,300 wage / ¥185,152 net) and the demo logins.

Treat anything entered in the demo as temporary. A walkthrough is most reliable done in one sitting, without long pauses.

A production deployment uses a permanent database, so **this reset does not happen there**. It is a demo-only limitation.

- The 丙 daily tax table currently covers up to ¥14,800 per day; days above that are estimated, and the screens and payslip label them "**estimate**" (see section 5 — confirm official values).

For questions, contact the vendor (MORABU Hanshin Kogyo).
